When, how, and why mobile app developers update third-party libraries they rely on?

Pasquale Salza¹, Fabio Palomba¹, Dario Di Nucci², Andrea De Lucia³, Filomena Ferrucci³

Third-party libraries

Crucial for the development of software

Save the effort related to the implementation of complex functions

Very popular for mobile apps

Libraries are software as well

Need to evolve

The updates aim at making them more stable and reliable

Why is updating important?

Apps have an intense and continuous release cycle

The user experience is fundamental

Users are the very testers and decide the success of an app

Is it always worth updating?

The public API may change and require development effort before being updated

Stability and reliability are not truly guaranteed

Do developers update libraries?

“Developers are not likely to prioritize library updates, citing it as extra effort and added responsibility.”

“... even though third-party reuse is commonplace, the practice of updating a dependency is not as common for many developers.”

Do Developers Update Their Library Dependencies?

An Empirical Study on the Impact of Security Advisories on Library Migration

Raula Gaikovina Kula · Daniel M. German · Ali Ouni · Takashi Ishio · Katsuro Inoue

Received: date / Accepted: date

Abstract Third-party library reuse has become common practice in contemporary software development, as it includes several benefits for developers. Library dependencies are constantly evolving, with newly added features and patches that fix bugs in older versions. To take full advantage of third-party reuse, developers should always keep up to date with the latest versions of their library dependencies. In this paper, we investigate the extent of which developers update their library dependencies. Specifically, we conducted an empirical study on library migration that covers over 4,600 GitHub software projects and 2,700 library dependencies. Results show that although many of these systems rely heavily on dependencies, 81.5% of the studied systems still keep their outdated dependencies. In the case of updating a vulnerable dependency, the study reveals that affected developers are not likely to respond to a security advisory. Surveying these developers, we find that 69% of the interviewees claim that they were unaware of their vulnerable dependencies. Furthermore, developers are not likely to prioritize library updates, citing it as extra effort and added responsibility. This study concludes that even though third-party reuse is commonplace, the practice of updating a dependency is

Type ● Release ● Use

Libraries popularity

The apps relies from 1 use of third-party library to a maximum of 44

The mean is about 4 libraries per app

RQ1

When do mobile developers update third-party libraries?

RQ1.1

Do mobile developers update third-party libraries?

To update, or not to update

70% of libraries were used but never updated during the app development life

Only 1% of commits refers to a version change

Upgrade vs downgrade

Upgrade vs downgrade

Downgrades
18.50%

Anyone, any idea why the build fails [...] does maven need to be updated too?!

RQ1.2

How does the technical lag¹ of mobile apps vary over time?

¹Zerouali, Ahmed, et al. "A formal framework for measuring technical lag in component repositories—and its application to npm." Wiley JSEP (2019).
